3. Prior art does not teach a semiconductor device package comprising a lead frame that includes an electrically conductive substrate having a flat bottom surface with "lands" protruding from it, an opposing flat top surface with "chip attach sites" that protrude from the top surface and that are interconnected by interconnections to input/outputs pads of a semiconductor device; a plurality of electrically isolated routing circuits electrically connecting the lands and the chip attach sites, wherein a first molding compound is formed between the lands and on the bottom surface; and wherein a second molding compound encapsulates the semiconductor device, the chip attach sites, and the routing circuits; the lands extend further outward on both sides than do the chip attach sites. See claim 1.
